Experience

Intermountain Healthcare

5 years 3 months

Staff Software Engineer

November 2019 - Present (10 months)

Greater Salt Lake City Area

- The Software Engineer works effectively across the entire software development life cycle.
- This includes requirements definition, prototyping, detailed design, coding, testing, deployment, and support of the day-to-day operation of production systems.
- The Software Engineer is expected to collaborate with technical staff, management, and business operations staff throughout all phases of the software development life cycle in order to deliver working solutions to complex business problems according to agreed upon timelines and budgets to support the mission, vision, and values of Intermountain Healthcare.
- The staff role is a journey-level professional in most aspects of software programming and development. Abilities encompass a broad knowledge within the software development domain.
- Typically implements designs developed by others, adhering to enterprise standards and best practices. Functions independently and produces results that meet standards of quality, timeliness, and acceptability with minimal supervision and general direction.
- Works as a team player, providing ideas and support to peers and the development team leadership.

Application Developer

September 2018 - November 2019 (1 year 3 months)

Greater Salt Lake City Area

1. Codes, tests, debugs, and documents programs, and enhances existing programs to ensure that production systems continue to meet user needs through UI/UX design and coding strategies.
2. Coordinates interface with user management regarding project status, direction and user needs to promote an environment of user cooperation and satisfaction.
3. Coordinates with the testing process through test review and analysis, test witnessing and certification of software.
4. Contributes to the development of high level system architecture documents and detailed design specifications to serve as a guide for system/application development.
5. May assist with scheduling, determining manpower requirements, and estimating costs to project completion in order to meet user requirements.
6. Maintains a high level understanding of industry application development best practices, tools, programming languages and techniques. Keeps current with new developments in the information technology industry and assists in the development and implementation of standards and methodologies at the organizational and departmental levels.
7. Coordinates with analysts and consultants in the design and development of new software applications.
8. Works with external software suppliers to coordinate software integration and resolution of problems.

Solutions Analyst

January 2018 - September 2018 (9 months)

Greater Salt Lake City Area

1. Maintains advanced level of understanding of functional design methodologies, tools, and techniques to effectively work with stakeholders and caregivers.
2. Documents and recommends workflow changes, functional requirements, specifications, and design solutions needed to support the clinical and business requirements for common and moderately complex problems.
3. Acquires and maintains an advanced level of understanding of the functional architecture, security, and compliance requirements of assigned systems and integration.
4. Utilizes appropriate tools to meet ad hoc informational needs.

5. Participates with information systems to solve issues of moderate to advanced levels of complexity, incidents, and problems according to agreed upon service levels and defined standards and processes.
6. Collaboratively works with peers, information systems, internal and external stakeholders, and suppliers.
7. Provides subject matter expertise to technical and clinical partners; collaborates with technical partners in the technical design, technical implementation, and technical operations of assigned systems and integrations.
8. Collaborates with key clinical and business stakeholders to determine rules, needs, specifications, feasibility (workflow and cost), and priorities for application development / configuration / acquisition requests and projects of all levels of complexity and according to organizational standards and processes.
9. Consults with key clinical and business stakeholders, and collaborates with information systems on selection and acquisition of 3rd party solutions.
10. Collaborates with key stakeholder group(s) (e.g. Clinical Programs, Clinical Services, Divisions, etc.) and key Information Systems caregivers in the acquisition, configuration, development, testing, and implementation of solutions (vended and internally developed) with all levels of complexity.

Application Systems Tech Analyst

October 2015 - January 2018 (2 years 4 months)

Greater Salt Lake City Area

- Documents and recommends workflow changes and technical/functional designs needed to support the business requirements for common problems.
- Tests applications, systems and configurations for projects with minimal complexity and according to IS standards.
- Creates technical documentation including knowledge articles, workflow diagrams and escalation diagrams
- Acquires and maintains a moderate/high-level understanding of the technical and functional architecture of iCentra EMR systems and integration.
- Under supervision, documents and recommends workflow changes and technical/functional designs needed to support the business requirements for Knowledge Centered Support (KCS) in ServiceNow systems utilizing HTML, CSS, and JavaScript in Front-end Web Development
- Under supervision, solves common and moderately complex issues, incidents, and problems according to agreed service levels and according to IS Standards. Collaboratively works with peers, internal and external stakeholders

- Participates and collaborates with key stakeholders in the training of peers, end-users, and other IS team members.
- Participates in the development of training and knowledge based materials for use by peers, end-users and other IS team members.
- Under supervision, develops and implements communication plans to all stakeholder groups.
- Represents the KCS activities in iCentra support meetings and other invited meetings
- Participates in weekly conference status calls with other iCentra support teams
- Participates in problem review meetings to determine known error record needs
- Ensure documented support processes are being followed and provide recommendations for continuous improvement to these processes
- Maintains technical and business knowledge for areas of responsibility and acts as a subject matter expert and resource to others
- Responsible to initiate and facilitate process improvement opportunities with management within the area of responsibility.
